## Engineered for Best Fixture Performance

Fulham LumoSeries drivers are all built on core engineering design principles for exceptional standards of performance and reliability in LED systems. Highest-grade critical components together with design features for thermal management ensure excellent reliability. Our low ripple designs create flicker-free lighting and perfectly smooth dimming. Simplicity of specification and installation is a key characteristic of all Fulham LumoSeries drivers. Hence the wide voltage and current ranges and industry leading low inrush current.

**Future proof LED driver with industry leading voltage and current range enabling seamless support of LED generations.**

Suitable for:

## Engineered for Performance

- Industry leading efficiency
- Excellent EMC behavior
- Very high power factor
- Hot swapping of LEDs > 3W

## Engineered for Reliability

- Low inrush current
- Thermal protection (automatic current limiter)
- Short and open circuit protection, overload and overvoltage protection

## Engineered for Simplicity.

- Future-proof flexibility – industry leading voltage and current range enabling seamless support of LED generations and minimizing supply chain complexity

## 5 year warranty

Fulham LumoSeries takes pride in the quality of its products. We not only develop all products in house, they are also produced to ensure guaranteed reliability and performance. Fulham LumoSeries drivers come with the assurance of a 5 year warranty. After all, with typical LED lifetimes of 50,000 hours, it is critical to have a power supply with equal reliability.

## Product features

- Wide output voltage range 6 - 42 Vdc
- Wide range of current settings 100 - 1200 mA
- 0-10V-, 1-10V-, potentiometer- and pulse dimming
- Suitable for warm dimming (natural toning/ dim-to-warm) LEDs
- Max inrush current 327 mA
- Zero ripple current
- Dual stage topology
- Active overcurrent protection
- Up to 85 % efficiency across a wide range of loads
- Power factor > 0.95
- SELV
- ENEC certified
- Engineered and Manufactured in Europe

## Certificates and standards

- ENEC05, CE
- EN55015 / EN61000-3-2 / EN61347-2-13 / EN61347-1 / EN61547 / EN62384 / SELV

## Classifications

## Dimming

## Specific technical data

Type	Efficiency at full load	Output current	Constant voltage output	Output voltage range	Open circuit output voltage	Max. output power	Dimming
L05011i2	85 %	100 - 1200 mA	6 - 42 Vdc	6 - 42 Vdc	48 Vdc	20 W	0-10V, 1-10V, potentiometer 100K log b, pulse (SELV)
L05011i3	85 %	200 - 1200 mA (20W) 600 - 900 mA (24W)	-	6 - 42 Vdc	48 Vdc	20 W 24 W	0-10V, 1-10V, potentiometer 100K log b (SELV)
L05011i4	85 %	200 - 1200 mA (20W) 600 - 900 mA (24W)	-	6 - 42 Vdc	48 Vdc	20 W 24 W	pulse (SELV)

## Technical data

Rated supply voltage	220-240 Vac
Input voltage	180-240 Vac / 150-275 Vdc*
Mains frequency	50/60 Hz
Output current tolerance	5 %
100 Hz ripple current at full load	<1 %
Power factor at full load	> 0.9
THD	%
Standby power	350 mW
Nominal line current at 240 Vac	110 mA
Dimming method	linear
Minimum dim level	15 mA
Non-volatile memory	Yes
Startup time	< 1s
Warm up time to 95% of light output	< 2sec
Output isolation	SELV
Surge protection (diff. / comm.)	2 kV / 6 kV
IP classification	IP 20
Circuit lifetime	50,000 hrs at Tc max.
Case dimensions	110 x 52 x 23.5 mm
Case material	Polyamide 6 (PA6)

### Inrush current

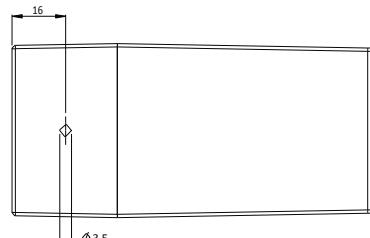

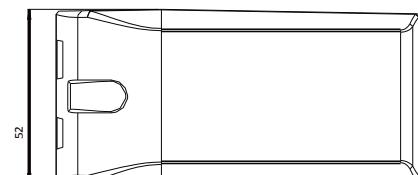

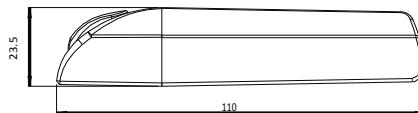

\*External DC fuse required

Mains max. peak inrush at full load	0.200A per driver on phase 60° (average starting angle)* 0.327A per driver on phase 90° (worst case starting angle)* 0.162A per driver on phase 60° (average starting angle)** 0.170A per driver on phase 90° (worst case starting angle)**
-------------------------------------	--

\*\* Tested at 240 Vac 1 driver connected, with TTI HA1600A analyzer.

\* Tested at 240 Vac 10 drivers parallel connected, with TTI HA1600A analyzer.

## Dimensions

## Maximum number of drivers on automatic circuit breakers

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20
L05011i2 / L05011i3 / L05011i4	85	110	136	170	85	110	136	170

## Thermal specifications

Maximum ambient temperature ( $t_a$ )	-20° to 42°C
Maximum case temperature ( $t_c$ )	L05011i2: < 80°C* L05011i3,4: < 70°C**
Storage temperature range	-20 to 50°C

\* 85°C when mounted on a heat conductive surface at  $T_a$  max.

\*\* 83°C when mounted on a heat conductive surface at  $T_a$  max.

### Overload protection

If the maximum output power is exceeded, the LED driver reduces the LED output current. After elimination of the overload the nominal operation is restored automatically.

### Over temperature protection

The LED driver is protected against thermal overload. If the temperature limit is exceeded, the output current is reduced.

### Active overcurrent protection

Active overcurrent protection to allow hot swapping of LEDs higher than 3 Watt.

### Short-circuit protection

In case of a short circuit the LED driver switches to protection mode. After the removal of the short-circuit the LED driver will recover automatically.

### No-load operation

In no-load operation the output voltage will not exceed the specified open circuit output voltage.

### Secondary switching

The L05011i2, -i3 and i4 are designed to switch the LEDs on/off by using the dim input or by switching the mains.

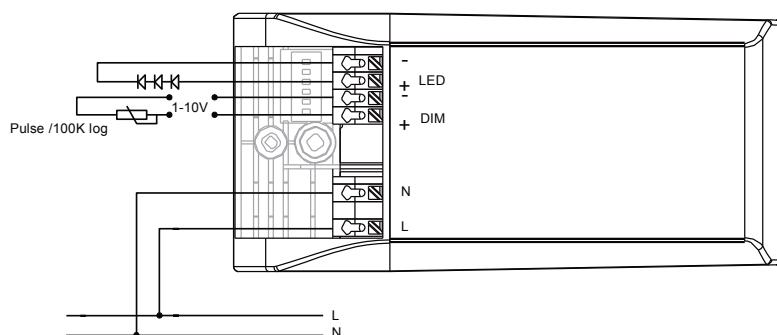

The L05011i2, -i3 and -4 are not designed to switch the LEDs directly on/off in the secondary power line.

### LED load

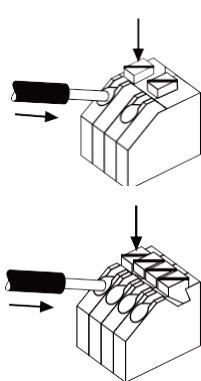

Fulham LumoSeries LED drivers are designed to drive passive LEDs, -COB's and -LED assemblies

Proper function is not guaranteed when (LED)loads with active components are used.

### Wiring diagram

### Wiring of device

#### Solid

wire preparation:  
0.2 – 1.5 mm<sup>2</sup>  
8.5 – 9.5 mm

#### Stranded

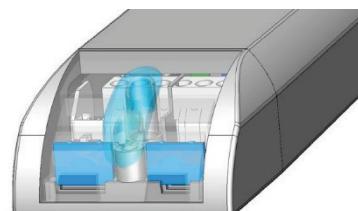

wire preparation:  
0.2 – 1.5 mm<sup>2</sup>  
8.5 – 9.5 mm

wire preparation:  
0.2 – 1.5 mm<sup>2</sup>  
8.5 – 9.5 mm

wire preparation:  
0.2 – 1.5 mm<sup>2</sup>  
8.5 – 9.5 mm

### Strain relief

The strain relief inserts can be removed to accommodate wiring of larger diameters.

## Dimming

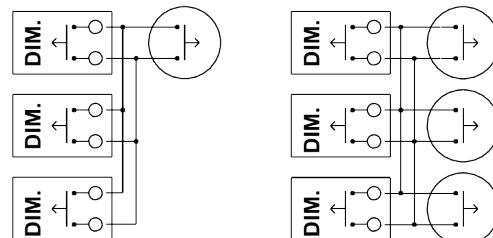

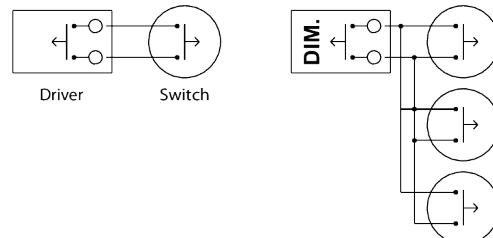

The L05011i2, -i3 and -i4 can be switched on/off and dimmed by using the dim input. Only dimmers with a minimum class II protection may be used.

### Pulse dimming

The L05011i2 and -i4 can be dimmed with a puls- switch. In case of multiple drivers on one dimmer make sure that the wires are connected according to polarity.

We recommend pulse operation mainly for systems in which each driver is dimmed independently.

Complete synchronous dimming is only possible with a master-slave system where the master processes the pulse. These drivers does not feature such a system.

### Disorganized system when using pulse function

When parallel connecting a pulse switch on several drivers it can occur that the pulse length is just on the detection border. On this critical border it can occur that the drivers are not working in unison. They can be reset with the following procedure.

#### Reset procedure:

By long pressing the pulse switch the drivers always turn on, independent of the initial state.

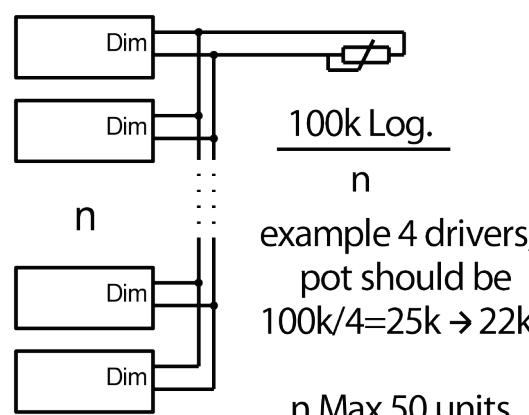

Give a short pulse and all the drivers are now off.

By long pressing again all drivers turn on and ramp up in unison.

### 1-10 V dimming

The L05011i2, and i3 can be dimmed with 0-10V, 1-10V or a potentiometer.

In case of multiple drivers on one dimmer make sure that the wires are connected according to polarity.

### Warm dimming

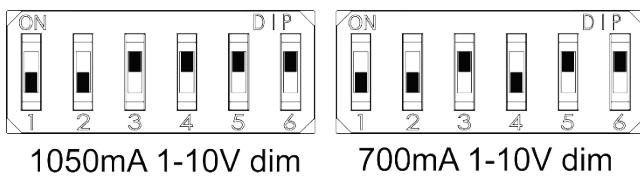

The L05011i2/i3 and i4 use the linear dimming method instead of PWM. Therefore the driver is suitable for warm dimming / dim-to-warm / natural toning / sunset dimming / warm glow dimming.

## Dipswitch setting

The constant current or constant voltage setting can be adjusted by using the dipswitch terminal on the driver. In these tables all the supported currents and voltages are listed down.

When the switch lever is in the up position (ON), it is seen as a '1'. When the switch lever is in the down position (Off), it is seen as a '0'.

The examples below demonstrate two settings for the L05011i2.

## L05011i2 settings

Output current (mA)	Dim mode	Setting					Current / voltage mode	Maximum Output Voltage / Current
